

Kids and the COVID-19 Vaccine

Children ages **6 months and older** are eligible. The vaccine is recommended for all children, even if they have already been infected with COVID.

Why vaccinate kids for COVID?

PREVENT SEVERE ILLNESS OR HOSPITALIZATION

Children haven't fully developed natural defenses to protect against diseases. The vaccine helps keep them from getting very sick or needing to be hospitalized, if they do get infected.

STAY SAFER IN SCHOOL AND REDUCE ABSENCES

The vaccine protects against the germs kids are exposed to from their classmates. Also, reducing the risk of COVID infection means kids are less likely to miss school or other group activities.

REDUCE THE SPREAD OF THE VIRUS

The vaccine reduces the chance your child will spread the virus to loved ones like parents or guardians, other family members, or friends.

VACCINE SAFETY IS A TOP PRIORITY

All necessary steps were taken to make sure the vaccines were safe before public release. Ongoing monitoring shows the vaccines continue to be safe and effective.

SIDE EFFECTS ARE MILD

Side effects may include pain at the injection site, irritability, tiredness, headache, and fever. These symptoms are usually mild and go away in 24 to 48 hours.

Make an appointment for your child.

Zufall Health can vaccinate your child against COVID at any of our medical locations. Scan the QR code to find a medical location near you. Have questions? Talk to your Zufall medical provider.
